

With 50 years of working closely with our clients to provide solutions to their requirements, we have both the knowledge and the facilities to fabricate a wide range of products to exact specification: from fine engineered items through to heavy steel structural work and steel constructions.

- Fabrication work in mild steel, aluminium and stainless steel.
- MIG, TIG and ARC welding.
- CNC facility for machining, turning and milling.
- In-house spray booth for epoxy powder coating or specialist finishing.
- On-site visits to discuss your product designs and technical details.

**QUALITY  
Guarantee**

## SITE WORK

Our on site capacity is most extensive. We offer the following services:

- Erection of mezzanine floors.
- Office and factory refurbishments.

• Internal staircase

• Loading dock installation for the Royal Mail

- Integrated offices
- Mechanical and electrical installations.
- Internal and external stairways.

• Steel structural work incorporating a mezzanine floor

## PROJECT MANAGEMENT

A Project team are responsible for any work carried out on a customer's premises.

Typically our Project Team will organise the fulfilment of contracts for steel structural work, on site welding, installations including mezzanine floors and office partitioning, refurbishments and storage/handling systems that include racking, shelving, conveyors and automated equipment.

- A Project Manager will be appointed to work with customers, to ensure complete satisfaction.
- Our team can also arrange and monitor permanent or temporary on site maintenance contracts that can include full mechanical and electrical facilities.
- A project can include the co-ordination of a multitude of varying requirements so that customers can enjoy the benefits of a 'One Stop Shop' approach to a large contract.

We are happy to work in tandem with other contractors or manage the contracts on our customer's behalf.
