

ORDER FULFILMENT

The system ensures an unimpeded pick face thus avoiding the dangers of fork lift truck and order picker collision. Pick routes can be drastically shortened and order picking speeds increased by 100% or more and therefore achieving greater all round efficiency. Restocking takes place at the rear of the pick face away from order picking activity and in keeping with FIFO principal. This also ensures that stored goods are picked in rotation.

CELL-FEED SYSTEMS

Cell-feed systems allow parts and components to be fed to work stations in fast through put, lean manufacturing environments notable reductions in double handling.

LINE SIDE PRODUCTION

Ergonomically efficient parts picking and a tidy work environment are but two reasons for choosing line side feed racks. Restocking from the rear with no interference to the assembly face.

LIVE CARTON STORAGE BAYS

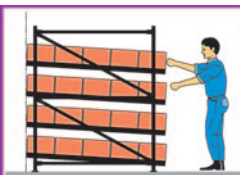

- Goods roll automatically on rollers.
- Suitable for medium and heavy duty applications.
- Flowshelves adjustable on 12.5mm increments.
- Galvanised frames and epoxy coated beams.
- Goods can be stored and used on both the last-in-first-out (LIFO) and first-in-first-out (FIFO) principles.

Each bay comes complete with:

- 2 frames.
- 3 support beams.
- 4 flow shelves.
- Each shelf with 3 lanes to suit a 400mm wide container.

Static option with straight shelves
