QUADBLASTER
ULTRASONIC
BIRD REPELLER

The Quadblaster is an ultrasonic high frequency bird repeller that uses sound waves that are virtually in-audible to the human ear. Wherever silent operation is essential these units can be used indoors. The sound pressure emitted by these devices temporarily affect the inner ear and nervous system of the birds located in direct line-of-sight of the speaker up to 10m range. This forces the birds to flee the protected area. One model is fitted with an additional automated strobe light to further distract the birds for extra protection.

- Easy to install.
- Lightweight and flexible to use.
- 240v AC operation.
- Ultrasonic operation.
- Ideal for warehouses and factories.
- 360° range.

REF	Description	PRICE
AD019	Bird repeller	£1018.68
AD071	Bird repeller with strobe light	£1225.74
