

Safety Treads & Decking

“Keep a steady foothold with Action Handling”

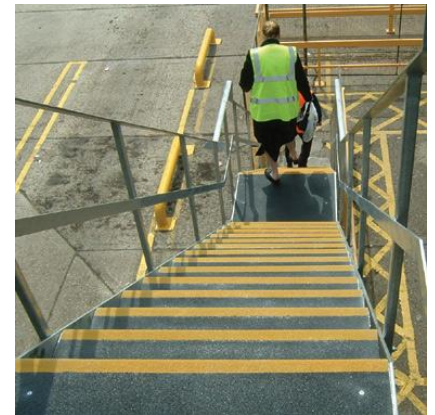

All our safety treads & decking equipment is designed to comply with Health & Safety regulations

Safety of personnel in environments where there are slippery surfaces is absolutely vital. When a sub-contractor of British Waterways noticed an increase in injuries and sick-leave at one particular site, they decided to investigate. The conclusion of this was that a large number of the workforce had slipped on unsecure flooring and something had to be done immediately to ensure that Health & Safety regulations were being adhered to.

The sub-contractor’s first port of call was Action Handling, to arrange a meeting and discuss any improvements that could be made. A large quantity of safety tread & decking equipment was supplied and installed within 3 working days. An overview of the kit that we supplied is detailed below;

Slipgrip (right) gives a complete covering of the entire stair tread or stairwell landing and is extremely easy to install. The fibreglass profile is covered with a very hard wearing grit non slip laminate.

- An instant remedy to slippery wood and steel staircases.
- Complies with UK Building Regulations and DDA Legislation.
- Stair Tread Slipgrip is supplied in a choice of five lengths and with a tread depth of 220mm – 345mm

Slipgrip Flat Sheet (left) has the same characteristics as the Slipgrip Stair Treads and Landing Covers.

- Ideal for walkways, ramps, gangways, factory floors etc.
- Durable for forklift use.
- Non slip safety laminate grip surface.
